Integrating video conferences in teaching – Experience gained in the virtual seminar “Equal Opportunities in Comparative Perspective”

Abstract

The authors describe a combination of videoconferencing and videotesting employed in an international teaching context. They give two basic settings for two-point videoconferences that differ in participation of students. They also depict how videoconferences were integrated in a virtual, i.e. internet-based course. Their experience showed that video-mediated communication posed few problems for lecturers. Regarding the aspects of sustainability and internationalisation videoconferences offer new perspectives for teaching.

Keywords

video conference, videocasting, elearning, internationalisation, equal opportunities
